

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A method of providing a location specific service in a digital cellular communication network using unstructured supplementary service data, wherein said unstructured supplementary service data is sent to a network node of said network by at least one mobile station, said unstructured supplementary service data ~~service~~ being dependent of location information of said at least one mobile station, wherein said method comprises a step of
including location information in said service data by said network node.
2. (Currently Amended) The method according to claim 1, wherein said network node is a Mobile Services Switching Center (MSC) and forwards said unstructured supplementary service data, including the location information, to a storage unit.
3. (Previously Presented) The method according to claim 2, wherein said storage unit is a Home Location Register.
4. (Previously Presented) The method according to claim 2, wherein said storage unit is associated with an external service node.
5. (Previously Presented) The method according to claim 1, wherein said network node further includes a Reference Number in said service data.
6. (Currently Amended) The method according to claim 5, wherein the *Reference* Number is used to correlate a service data call detail record of said

unstructured supplementary service data data forwarded by said network node, with a service call detail record of said service provided.

7. (Previously Presented) The method according to claim 1, wherein said location information is used for location-dependent charging.

8. (Previously Presented) The method according to claim 1, wherein said location information is used for time-dependent charging.

9. (Previously Presented) The method according to claim 8, wherein said storage unit keeps a register of location identifiers, such as cell identifiers or service area identifiers, mapped on geographical time zone data, and a correction factor applicable for any cell that resides in a time zone different from the time zone of said network node.

10. (Previously Presented) The method according to claim 1, wherein said network node is a mobile services switching centre.

11. (Currently Amended) A network node for a telecommunications network comprising an input unit for receiving unstructured supplementary service data from at least one mobile station, comprising

a processing unit for processing said unstructured supplementary service data, and

means for maintaining location information of said at least one mobile station, wherein said processing unit is arranged for including said location information of said at least one mobile station in said unstructured supplementary service data.

12. (Previously Presented) The network node according to claim 11, wherein said network node further comprises means for generating a reference number

associated with said service data, wherein said processing unit is arranged for including said reference number in said service data.

13. (Previously Presented) The network node according to claim 11, wherein said network node is a Mobile Services Switching Center, (MSC) and comprises an output unit for forwarding said service data to a storage unit.

14. (Previously Presented) The network node according to claim 13, wherein said storage unit is a Home Location Register.

15. (Previously Presented) The network node according to claim 13, wherein said storage unit is associated with an external service node.

16. (Previously Presented) The network node according to claim 11, wherein said network node is a mobile services switching centre.
